

AGRICULTURAL & HORTICULTURAL SPRAY OILS

SUNSPRAY

SUNSPRAY® 11N and 11E

Sunspray® 11E has a slightly broader distillation range and slightly higher midpoint than other Sunspray® oils so it is more effective in use during deep dormancy to assure ample resistance to weathering. The "N" version is available for formulators.

SUNSPRAY® 7N and 7E

As a spray, Sunspray® 7E evaporates quickly and uniformly from the surface to trees and plants, providing efficient pest control with reduced chance of phytotoxicity. With a low midpoint and narrow distillation range, it is the ideal dormant oil for deciduous fruit production or as a spring/fall citrus spray. The "N" version is sold to formulators who prefer to add their own emulsifier.

ULTRA FINE®

Sunspray® Ultra-Fine® Spray Oil is a year-round pesticide designed to stay on the leaf surface long enough to kill the pest, but not too long to cause plant damage. It protects plants ranging from sensitive bedding plants and indoor foliage to landscape ornaments and field grown vegetables. Ultra-fine® meets the increasing need of growers for an effective pesticide that can be used as a mix or as an alternative to those chemicals that may be potentially harmful to the environment. Ultra-fine® kills most soft bodied insects, mites and their eggs upon contact and acts as a preventive for certain fungal and disease infestations when incorporated in a regular program.

BIO SPRAY

Biospray is a biodegradable oil adjuvant for herbicide and insecticide mixtures. It can be used as an additive in crop protection applications, as a biological activator or as a tank mix addition. This non-toxic biological adjuvant joins all needed properties in horticultural applications, as there are: good solubility, excellent fluidity, moistening & penetrability and a good resistant against lower temperatures. When mixed with glyfosaat, Biospray becomes a perfect anti-drift agent.

BANANA OIL

A highly refined paraffinic oil especially developed to fight and/or cure "Yellow Sigatoga". This banana tree disease is caused by the Mycosphaerella Musicola mould, which attacks the whole plant. Banana oil can also be used to fight and/or cure "Black Sigatoga".
